LinkedIn: Saneesh Morais — Portfolio: Saneesh Portfolio — GitHub: GitHub Profile

Personal Profile

Recently completed BSc Computing with Artificial Intelligence Technology graduate focused on AI engineering, software development, data analytics, workflow automation, Python, SQL, FastAPI, REST APIs, machine learning, LLM workflows, and practical product building. Built AI, ML, dashboard, validation, and automation projects that improved forecasting accuracy from 72% to 85%, reduced document review time by 30%, and cut reporting time by 15%, supporting junior technology roles that value fast learning, clear communication, reliable outputs, and turning technical ideas into usable tools.

Technical Skills

AI and LLMs: ChatGPT, Claude, Claude/OpenAI API, Anthropic API, LangChain, RAG, Prompt Testing, AI Agents, Task Automation

Programming and APIs: Python, JavaScript, SQL, FastAPI, Flask, REST APIs, HTML, CSS, Docker, Git, GitHub, GitHub Actions

Data and Machine Learning: pandas, NumPy, scikit-learn, TF-IDF, Cosine Similarity, Model Evaluation, Data Cleaning, Data Validation

Databases, Cloud and BI: PostgreSQL, MongoDB, SQLite, MySQL, AWS EC2/S3, Tableau, Power BI, Excel, Technical Documentation

Education

BSc Computing with Artificial Intelligence Technology

Oct 2023 – Jun 2026

Northumbria University London

Expected First Class Honours

Modules: Programming in AI, Machine Learning, Data Science, Software Development, Data Structures and Algorithms, Cloud Computing, ML on Cloud, AI Applications.

Work Experience

Data Analyst Intern

Jan 2025 – Mar 2025

Savant Technologies, London – Remote

- Analysed 10K+ customer and operational records using Python and SQL, translating messy data into clearer reporting outputs.
- Built cleaned datasets, SQL queries, and Tableau dashboards, reducing manual reporting time by 15% through repeatable workflows.
- Added Python validation checks for missing, inconsistent, and duplicate records, decreasing reporting inconsistencies by 10%.
- Documented findings and recommendations clearly so stakeholders could understand data quality issues and next actions.

AI Intern

May 2024 – Aug 2024

3NS.ai, London – Hybrid

- Built and tested AI prototypes for financial analysis, improving forecasting accuracy from 72% to 85% by refining model inputs.
- Reviewed 20+ variables through feature engineering, validation checks, and model evaluation to improve output reliability.
- Designed an NLP document review workflow using TF-IDF and cosine similarity, reducing financial document review time by 30%.
- Recorded assumptions, outputs, limits, and progress so others could review, extend, and trust the AI workflow.

Projects

Personal AI Agent with Memory

- Built a Python agent using LangChain and Claude/OpenAI API with persistent memory, document Q&A, and task automation.
- Used GitHub Copilot and Codex to accelerate development while testing prompts, debugging outputs, and improving reliability.

AI Impact OS – FastAPI Workflow Automation Prototype

- Built a FastAPI and SQLite prototype to capture workflow pain points, score AI opportunities, and track ideas from concept to use.
- Designed dashboard, report, and status endpoints to support workflow automation, ownership, reporting, and decision tracking.

End to End ML Pipeline with MLflow

- Built a machine learning pipeline covering data ingestion, preprocessing, training, evaluation, versioning with MLflow, and FastAPI serving.
- Tested model outputs, tracked experiments, and documented milestones to support repeatable model deployment and optimisation.

Certifications

IBM Artificial Intelligence Fundamentals (2025) — Databricks Generative AI Fundamentals (2025) — Python Programming – Networkz Systems (2023)

Interests

AI agents, software development, workflow automation, data analytics, product building, machine learning, chess, calisthenics.
